

# Recommended Plants for Pollinators & Beneficial Insects

## California Central Valley Region

### Plant Selection

The plants on this list are recommended for use in pollinator habitat restoration and enhancement projects in agricultural landscapes. These species have been selected because they are attractive to a diversity of different bee species, and provide pollen and nectar resources throughout the season, provided that a minimum of three different plant species from each blooming period (early, mid, and late season) are selected. A majority of plants recommended are native, drought tolerant, easy to establish, and don't serve as alternate hosts to crop pests or diseases.

### Native Species for Pollinators and Beneficial Insects

SCIENTIFIC NAME	COMMON NAME	BLOOM	LIFE	FORM	SUN	WATER	SOIL	COMMENTS
<i>Achillea millefolium</i>	Common yarrow	MID	P	H		L-H	ANY

### KEY

BLOOM Time

LIFE Cycle—annual (A); biennial (B); perennial (P)

FORM—herbaceous (H); woody (W); grass/sedge (G)

SUN Requirements—full sun (☀); full sun/partial shade (☀☁); requires partial shade (☁)

WATER Needs—Low (L); medium (M); high (H)

SOIL Texture(s)

Monarch nectar plant

Bumble bee plant

Larval host (butterfly/moth)

Attracts beneficial insects

Fire resistant

Deer resistant

**NRCS Conservation Planners. PLEASE NOTE: Before purchasing or installing any plants for a project, check each species' suitability for different NRCS Conservation Practices by using the NRCS California eVegGuide (<https://www.calflora.org/nrcs/>).**
